

# Axial

*Instant Capital · Effortless Compliance*

A liquidity & compliance engine for Philippine MSMEs built on Stellar.

Team Axon Enjin — Carlos Jerico Dela Torre · Aidan Tiu · Gerald Berongoy · Rhandie Sales Jr.

# Being a Filipino business is going real-time

Two facts of business life are ending at the same moment — capital and compliance are both becoming real-time.

## THE CASH GAP

# \$221B

MSME funding demand vs \$15B formal supply

Enterprise buyers pay Net 60–90. Payroll runs every two weeks.  
The cash is always trapped in the gap.

## THE COMPLIANCE SHIFT

# Dec 31, 2026

BIR e-Invoicing (EIS) RR 11-2025 & 26-2025

Structured JSON invoices, digitally signed, transmitted within 3 days. Paper, audited-later, is over — the real-time tax wave is here.

# This change creates a fork

## WINNERS

### **Liquid + compliant + disciplined**

Funded. Kept inside enterprise supply chains. Free to scale.

## LEFT BEHIND

### **Spreadsheet-bound + cash-starved**

Dropped from supply chains (buyers refuse paper), penalized by BIR, locked out of capital with no collateral.

### **And the undisciplined financiers blew up too.**

Greensill: a \$10B collapse, financing invoices that weren't confirmed to exist || Goldfinch: default after default on-chain.

*The lesson the whole industry learned: blockchain doesn't fix credit risk, discipline does. The winners are the disciplined.*

# Capital and compliance that just happen

Now imagine the other side of the change; a business where the friction simply disappears.

## Cash in minutes

Invoice your client; the advance lands in minutes, not 60 days. No collateral.

## Payroll, routed

SSS, PhilHealth, and Pag-IBIG split automatically

## Filing, ready to approve

Your BIR submission is prepared and waiting for one click. No midnight portals.

## Back to building

You're liquid, you're compliant, and you're free to do the actual work.

# One pipeline. Liquidity in, compliance out

Both halves turn on the same on-chain event — that's what makes them inseparable, not bolted together.

*No spreadsheet in the middle.*

# “How do I get cash now, without collateral?”

Upload a confirmed invoice. We tokenize it and execute an atomic swap on Stellar.

**$\leq 85\%$**

of face value advanced

**Minutes**

not 60–90 days

**No collateral**

the receivable is the asset

The interface shows pesos. Settlement runs on USDC underneath. That's the instant-capital half.

# “What if it's a scam? What if the company closes?”

The right question — and our answer is structural, not a promise. A closed loop of four independent layers.

## 1 · Confirmed-invoice gate

No funding unless the verified payer confirms the invoice. Kills fake & inflated invoices at the root.

## 2 · Notice of Assignment + lockbox

Once acknowledged, paying anyone but the lockbox doesn't clear the debt (Civil Code). Kills redirection.

## 3 · Reserve + recourse

Advance 85%, not 100%, with a holdback + recourse. If a business closes, the payer still repays the funder.

## 4 · Reconciliation

Auto-freeze and escalate within days if a due invoice's lockbox stays empty. Leakage caught fast.

**We don't promise fraud is impossible. We make it expensive to attempt, contained when it happens, and caught fast.**

# Effortless, transparent. A person is always in the loop

We deliberately do NOT silently auto-file to the BIR. Axial prepares; you approve.

1

## Prepare

Map the ledger event to the EIS 20-field schema; JWS-sign; build payroll splits

>

2

## Review

The filing is surfaced for a human to check — the control that catches errors & fraud

>

3

## Submit

One-click approval transmits within T+3; reference written to the Stellar memo

*Full auto-submission is on the roadmap — gated on BIR software certification + a Permit to Transmit. Until then, a human approves every filing.*

# Speed, trust, and proof — all at once

This problem needs all three in one rail. Stellar is the only one that delivers them in production.

## Seconds

to settle, for fractions of a cent

## Production USDC

Circle-issued, on Mainnet — real money

## Verifiable trail

an audit trail a buyer or regulator can check

**The chain is the rails and the proof**

CAN WE MAKE IT REAL?

# We didn't write a deck and stop. We built it — in 7 days

- 4 Soroban contracts LIVE on Stellar Mainnet — mint · swap · payroll split · settlement
- Real USDC atomic swap · payer portal with NoA + lockbox funding
- EIS Co-Pilot preparing JWS-signed payloads, reference written to the ledger memo
- 2nd Runner-Up — Build on Stellar Philippines Hackathon 2026
- Collaborating with PDAX Sandbox API

[axial.axonenjin.com](https://axial.axonenjin.com)

*Overview → Liquidity (confirm → tokenize → swap → pesos) → Compliance (payroll + EIS prepared → approve → memo)*

# Where we are and how it pays

## LIVE NOW

- 4 contracts on Mainnet + real USDC swap
- Closed-loop payer portal (NoA + lockbox)
- Compliance Co-Pilot — prepare & review

## NEXT

- Final on-chain settlement leg
- BIR certification + Permit to Transmit
- Regulated, qualified liquidity partners

## TWO ENGINES

A thin spread on every peso we unlock below traditional factoring.

A recurring compliance subscription for every business the Dec-2026 mandate is about to catch. (Volume + a deadline)

AXIAL IS HERE

# Instant Capital. Effortless Compliance.

Filipino businesses shouldn't have to choose between making payroll and staying on the right side of the BIR. That's the axis we built Axial on.
